Light for new elevators and elevator refurbishment

Glare-free, large-area lighting elements for elevator car ceilings and walls. Homogeneously illuminated surfaces, continuously dimmable with white LEDs, with single-colour LEDs or with colour-changing RGB LEDs. Special shapes with cutouts for panels, advertising boards, switches, etc. are also available.

Development and production in-house | expert advice | short distances | quick implementation | everything from a single source

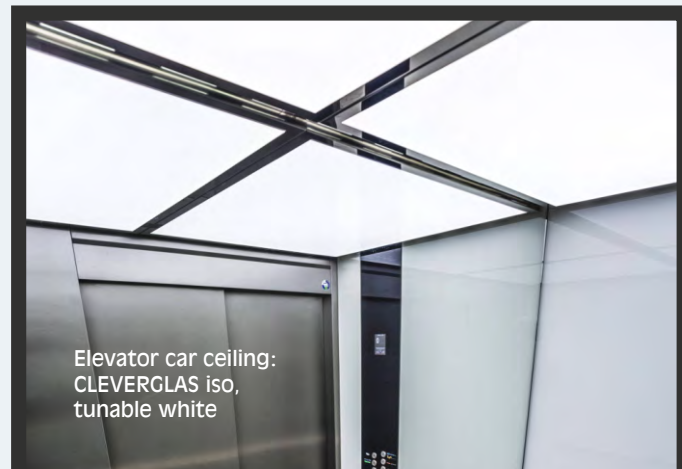

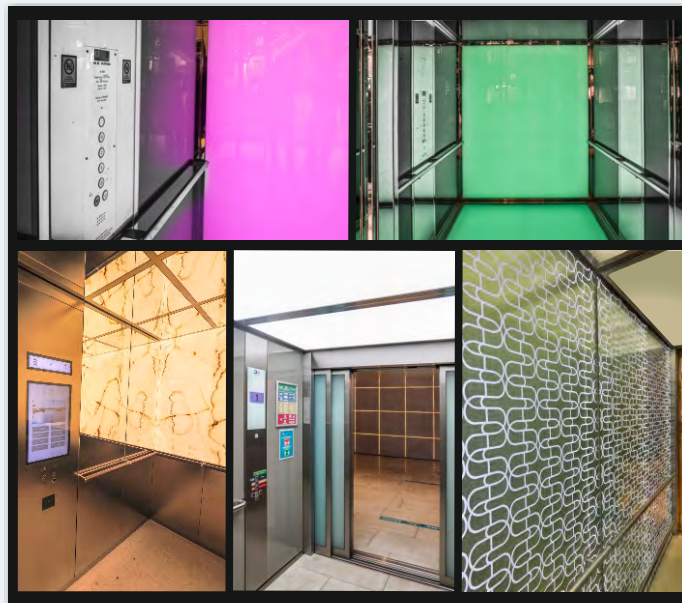

DIN EN ISO 9001:2015
REG.-NR. Q1 0116352

The name Hansen stands for high-quality lighting and control systems. Among others, our in-house development department designs tailor-made LED products for surface illumination and backlighting purposes.

We have been active in the elevator and escalator sector for about 10 years. We maintain long-term relationships with various elevator companies to develop new lighting solutions. We take care of individual needs and offer best possible solutions, a service much appreciated by our customers.

Supported by a team of 80 qualified employees, the entire value creation and production process takes place at our headquarters in Haselund, Northern Germany. This has been the case since the company was founded in 1984.
